Enabling Grids for E-sciencE

- **More free-time to reflect on the topics learned and to work on the "social Grid"**
- **(Java) exercise and Java guides should be available upfront**
  - Different levels of mastering java
- **Final exercise should be known from the beginning and not change**
  - Individual technologies should take the final exercise into account and prepare for it
  - Too complex – not enough focus on Grid computing but algorithm design (algorithms should be provided)
  - It's good to have one exercise that integrates all the knowledge
- **Individual tests – no group based judgment**
- **Better conceptual understanding – workshops, discussions**
- **Hard copies of material? – At least material should be available online upfront**
- **More focus on security**
