

# The Fourth International Summer School on Grid Computing 2006

Jolly Hotel delle Terme, Ischia,  
Bay of Naples, 9-21 July 2006

Grids underpin the rapidly emerging e-Infrastructure and Cyberinfrastructure. This will transform information-intensive and model-based thinking. It will enable global collaborations to make rapid advances addressing challenges in science, economics, design, engineering and medicine, in fact in all walks of life.

The School will bring together world experts and enthusiastic students. It will examine the conceptual and practical underpinnings of today's grids. Experts will discuss the challenges of building and sustaining e-Infrastructure, report its rapid influence on the way we research, design and make decisions. They will share their vision of the developments and challenges ahead. The work will be challenging but rewarding.

Students will be fired with enthusiasm, equipped with practical skills and will leave with many shared experiences, new friends and a new capacity for research into and using advanced distributed computing systems.

The School will be held on the beautiful Island of Ischia, Italy (near Naples) from Sunday 9th to Friday 21st July 2006.

The target audience will include enthusiastic young researchers who expect to use or develop grids in their research, and those who expect to lead the pioneering of e-Infrastructure and Cyberinfrastructure. We look forward to greeting participants from virtually every continent. The Summer School will be conducted in English, so participants are expected to be comfortable using spoken English.
